: TOWEL
COLLECTION :
.....

Disposable-free cleaning is here! Our Microfiber Towel Collection is the perfect cleaning partner for all of your household messes. Our Microfiber towels have a specific weave and texture to help them perform their main function designated by embroidered symbol.

What is **Microfiber**?

- Microfiber is one of the softest, most durable man-made fabrics available today. Developed in the late 1980's, Microfiber uses a high-tech process that "splits" fibers and finely weaves and loops them together to create a fabric that can pick up almost all foreign materials; trapping dust, dirt, and water within the Microfiber fabric.
- Microfiber is effective with or without using chemical cleaners or water. Because Microfiber possesses a natural static charge, it can be used dry to clean and dust almost any surface.
- Microfiber combines two different fibers: polyamide and polyester. Polyamide has a high capacity to absorb water, fat and residues. Polyester is capable of cleaning and polishing with minimum residue.

NAME AND SYMBOL	FUNCTION	DIMENSIONS
MICROFIBER DISH DRYING TOWELS 	The only towel you will need for virtually lint-free, dry dishes, containers and cookware. Use wet to clean and dry to wipe off excess water or liquid.	25.6 x 15.4"/65 x 39 cm
MICROFIBER DUST TOWELS 	Dust ceiling fans, overhead lighting fixtures, shelving and any other surfaces close to the ceiling. Also works well for home air filters and vents. One side has longer fibers for maximum dust pickup while the other side with shorter fibers is great for buffing and polishing.	14 x 12"/35.5 x 30.5 cm
MICROFIBER EYEGLASS TOWELS 	Satin weave is tightly woven, soft and smooth. Your go-to for the most delicate, clear-coat surfaces. Flawless sparkle for eyeglasses, sunglasses and electronic screens, without the use of cleaners.	8.4 x 5.7"/21.3 x 14.5 cm
MICROFIBER MOP TOWEL 	One side for scrubbing (use wet), and one side for polishing any floor (use dry).	23.6 x 19.7"/60 x 50 cm
MICROFIBER MULTIPURPOSE TOWELS 	Your go-to for most household messes. Special weave allows for strong scrubbing, super absorbency, and polishing. Perfect for scrubbing greasy, stubborn residue found inside the microwave, dishwasher, and on the stovetop. Quickly absorbs spills. Use dry for polishing and wet for cleaning.	12.2 x 12"/31 x 30.5 cm
MICROFIBER SCRUB TOWEL 	Every kitchen needs a good "scrubbie" to get baked on or dried food particles off your containers. Use the smooth side for polishing, and the rough side to scrub. Dry scrubbing could scratch your Cookware or Ultra Pro. Make sure the scrub towel is wet to help avoid scratching.	6.6 x 6.5"/16.8 x 16.5 cm
MICROFIBER WINDOW TOWELS 	Honeycomb texture makes this towel excellent for washing glass and shiny surfaces without detergents. And, it minimizes streaking! Virtually lint-free, so you won't see any streaks on your windows and/or mirrors. Can also be used wet to remove condensation from steamy bathroom mirrors.	16.4 x 16"/41.7 x 40.7 cm

Features and Benefits

- Each piece in the collection has a tag with the Tupperware logo, so you can hang them up for drying. They also include washing instruction and fabric composition.
- Heavy duty stitching on the edges of each piece help to prevent fraying for long-term use.
- Microfiber is designed to be used either dry – to take advantage of their electrostatic power – or wet (well wrung) allowing you to avoid using harsh cleaning chemicals and reducing cleaning time and waste. When dry, the fabric can absorb up to 8 times as much water as cotton. When used wet, the soft Microfiber cloth becomes a super scrubbing and cleaning tool.
- The Microfiber Towels are re-usable and can withstand over 500 washes. Their average lifetime is 2 years and can live longer if you do not use detergents. This makes them economical and a great choice for your environment and the planet.
- Microfiber is lint-free, guaranteeing a perfect high polish on stainless steel and other shiny surfaces as well as perfectly washed windows, glasses or the car.

Tips

- Most of the time, detergents are not necessary and can be replaced. For example, white vinegar is great for cleaning the floor. When cleaning, just reduce the usual dosage of detergent or other cleaning product to 50%.
- The Microfiber Towels are not suitable for use as an oven mitt; do not use them to handle hot dishes.
- Make sure the microfiber stays free of dirt particles as dirt particles might mark sensitive surfaces.
- Always make sure the Microfiber Towel is rinsed well before, during and after the usage in order to remove dirt that has been picked up.
- Wash the Microfiber Towels regularly.
- To catch dust more efficiently with your microfiber, fold it in two and rub the sides against each other. The movement will create more static attraction.
- Place a microfiber towel on top of the Eco Water Bottle Brush to completely dry the inside of bottles, jars, or any narrow spaces

Use and Care

- **Cleaning your product before first use is recommended.** During the first 2-3 washes, the color is likely to fade onto other textiles washed together. Therefore, it is advisable to wash the product separately or with similar colors at least 3 times before initial use.
- **Wet, Wring, Wipe.** These are the three simple tips for using Microfiber Household Textiles. Microfiber is designed to be used as dry as possible which reduces cleaning time and waste. They can also be used with water and with or without a little bit of cleaning product.
- **For best results on glass and shiny surfaces including stainless steel,** very lightly spray the cloth or surface to be cleaned with water or window cleaner and wash away streaks, water spots, fingerprints and residue with ease.
- **For dusting,** no dust spray is necessary; simply wipe the towel over the surface of your furniture, shelves, and desktops and anywhere dust accumulates.
- **For quick cleaning,** spray a mist of water over the dirty surface and wipe. The Microfiber towel will remove dust, dirt, fingerprints and water spots. When using our Microfiber Towels, it is always a good idea to wipe in one single direction flipping the towel often. To unload dust and dirt; rinse, wring and reuse.
- **Wash by hand or in a washing machine in cold water with laundry detergent.** Washing with hot water is possible but might shorten the life span of your microfiber cloth. For best results, put the towel in a separate bag in your washing machine, so external fibers will not stick to it.
- **Never use fabric softeners or dryer softening sheets.** Fabric softeners will stay in the fabric reducing absorbent qualities.
- **Avoid drying in a dryer where possible** or opt for a low heat (synthetic program) setting on your dryer. Drying with high heat may cause damage to the towel.
- **Do not use fabric chlorine or bleach.** Chlorine will accelerate the wear and tear of your microfiber cloth and this will reduce its efficiency.
- **Do not iron.**
- **To store,** simply hang up the towels by the attached tags. Can also be folded and stored in drawers or containers (make sure towels are completely dry).
